

Financial Accounting Lab (FL1002)

Ahmed Sultan
Comprehensive Notes for Short Questions

FAST School of Management – NUCES Lahore
Spring 2026

Contents:

#	Section	Topics	Page Ref
1	MS Excel – Basic Functions	SUM, COUNT, AVERAGE, MAX, MIN, references	2-3
2	MS Excel – Advanced Functions	SUMIF/S, COUNTIF/S, AVERAGEIF/S, VLOOKUP, HLOOKUP	3-5
3	MS Excel – INDEX-MATCH & SUMPRODUCT	Lookup alternatives, array formulas	5-6
4	MS Excel – Tools & Features	Conditional Formatting, Pivot Tables, Sorting, Filtering, Freeze Panes	6-7
5	QuickBooks – Setup & Interface	Company creation, icon bar, favorites, color	8
6	QuickBooks – Chart of Accounts	Account types, sub-accounts, editing, merging	8-9
7	QuickBooks – Customers & Vendors	Centers, custom fields, inactive, merging, reports	9-10
8	QuickBooks – Items	Inventory, Service, Non-inventory, Group, Other Charge, Discount	10-11
9	QuickBooks – Sales Tax	Tax items, groups, tax-exempt, assigning, reports	11-12
10	QuickBooks – Invoicing & A/R	Invoices, credit memos, payments, memorized invoices	12-13
11	QuickBooks – Inventory & Purchase Orders	PO, receiving, bills, valuation reports	13
12	QuickBooks – Payroll & Expenses	Employee setup, write checks, recording expenses	14
13	QuickBooks – Reports & Closing	P&L, Balance Sheet, Tax Liability, A/R Aging, closing books	14-15

SECTION 1: MS Excel – Basic Functions & References

► Basic Functions

Q1. What are the five basic Excel functions? Write syntax for each.

Ans: SUM: Adds values. =SUM(A1:A10). COUNT: Counts numeric cells. =COUNT(A1:A10). AVERAGE: Mean of values. =AVERAGE(A1:A10). MAX: Largest value. =MAX(A1:A10). MIN: Smallest value. =MIN(A1:A10).

Q2. What is the difference between COUNT, COUNTA, and COUNTBLANK?

Ans: COUNT counts only numeric cells. COUNTA counts all non-empty cells (text + numbers). COUNTBLANK counts empty cells. Example: If A1:A5 has {5, "Hi", "", 10, ""}, COUNT=2, COUNTA=3, COUNTBLANK=2.

► Cell References

Q3. Explain absolute, relative, and mixed cell references with examples.

Ans: Relative (A1): Changes when copied. If =A1+B1 is copied one row down, it becomes =A2+B2. Absolute (\$A\$1): Does NOT change when copied. \$ locks both column and row. Mixed (\$A1 or A\$1): One part locked, one changes. \$A1 locks column A but row changes. A\$1 locks row 1 but column changes.

💡 **Exam Tip:** Most asked in MCQs! Remember: \$ before letter = column locked. \$ before number = row locked. \$ before both = fully locked.

Q4. If you enter =A1*\$B\$1 in cell C1 and drag it down to C2, what will C2 contain?

Ans: =A2*\$B\$1. A1 is relative so it becomes A2 (row shifted). \$B\$1 is absolute so it stays \$B\$1.

Q5. If =\$A1*B\$1 is in C1 and you copy it to D2, what does it become?

Ans: =\$A2*C\$1. \$A (column locked) stays \$A, but row 1→2. B (column relative) shifts right to C, \$1 (row locked) stays \$1.

SECTION 2: MS Excel – SUMIF, COUNTIF, AVERAGEIF & Lookups

► SUMIF & SUMIFS

Q6. What is SUMIF? Write its syntax.

Ans: SUMIF adds values in a range that meet ONE condition.

Syntax: =SUMIF(criteria_range, criteria, sum_range)

Ans: Example: =SUMIF(B2:B10, "North", E2:E10) sums all values in column E where column B = "North".

Q7. What is SUMIFS? How is it different from SUMIF?

Ans: SUMIFS adds values based on MULTIPLE conditions. Key difference: (1) Sum_range comes FIRST in SUMIFS but LAST in SUMIF. (2) SUMIFS supports multiple criteria pairs. (3) SUMIF only supports one condition.

Syntax: =SUMIFS(sum_range, criteria_range1, criteria1, criteria_range2, criteria2, ...)

Ans: Example: =SUMIFS(E2:E10, B2:B10, "North", C2:C10, "Electronics") sums column E where Region=North AND Category=Electronics.

💡 **Exam Tip:** SUMIFS me sum_range FIRST hota hai. SUMIF me LAST. Yeh MCQ me zaroor aata hai!

► COUNTIF & COUNTIFS

Q8. What is COUNTIF? Write syntax and example.

Ans: COUNTIF counts cells matching ONE condition.

Syntax: =COUNTIF(range, criteria)

Ans: Example: =COUNTIF(C2:C10, "Delivered") counts how many cells in column C contain "Delivered".

Q9. What is COUNTIFS? How is it different from COUNTIF?

Ans: COUNTIFS counts cells matching MULTIPLE conditions simultaneously.

Syntax: =COUNTIFS(criteria_range1, criteria1, criteria_range2, criteria2, ...)

Ans: Example: =COUNTIFS(B2:B10, "Lahore", D2:D10, ">100") counts rows where City=Lahore AND Quantity>100. COUNTIF handles only 1 condition, COUNTIFS handles 2 or more.

► AVERAGEIF & AVERAGEIFS

Q10. Explain AVERAGEIF. Write its syntax.

Ans: AVERAGEIF calculates average of cells meeting ONE condition.

Syntax: =AVERAGEIF(criteria_range, criteria, average_range)

Ans: Example: =AVERAGEIF(C2:C10, "IT", E2:E10) averages salaries in column E where Department=IT.

Q11. What is AVERAGEIFS? How does its syntax differ?

Ans: AVERAGEIFS averages based on MULTIPLE conditions. Like SUMIFS, the average_range comes FIRST.

Syntax: =AVERAGEIFS(average_range, criteria_range1, criteria1, criteria_range2, criteria2, ...)

✦ **Exam Tip:** Pattern: Single-condition functions (SUMIF, COUNTIF, AVERAGEIF) → criteria range first. Multi-condition versions (SUMIFS, COUNTIFS, AVERAGEIFS) → result range first.

► VLOOKUP & HLOOKUP

Q12. What is VLOOKUP? Write its syntax and explain each argument.

Ans: VLOOKUP searches for a value in the FIRST column of a table and returns a value from a specified column.

Syntax: =VLOOKUP(lookup_value, table_array, col_index_num, [range_lookup])

Ans: Argument 1: What to search for. Argument 2: The table range. Argument 3: Which column to return (1st col = 1). Argument 4: FALSE = exact match, TRUE = approximate match. Example: =VLOOKUP("P109", A2:G100, 5, FALSE) finds P109 in column A and returns the 5th column value.

Q13. What is the difference between TRUE and FALSE in the last argument of VLOOKUP?

Ans: FALSE = Exact match. Returns #N/A if not found. Data does NOT need to be sorted. TRUE = Approximate match. Finds closest value less than or equal to lookup value. Data MUST be sorted ascending. Always use FALSE unless you specifically need approximate matching.

✦ **Exam Tip:** In exams, always use FALSE. 99% of the time exact match is required.

Q14. What is HLOOKUP? How does it differ from VLOOKUP?

Ans: HLOOKUP searches horizontally (left to right) in the FIRST ROW and returns a value from a specified row below. VLOOKUP searches vertically (top to bottom) in the first column.

Syntax: =HLOOKUP(lookup_value, table_array, row_index_num, [range_lookup])

Q15. Why can't VLOOKUP search to the LEFT?

Ans: VLOOKUP always searches the FIRST column of the given range and returns a column to its RIGHT. It cannot return a column that is to the left of the search column. This is a major limitation. Solution: Use INDEX-MATCH instead, which can look in any direction.

SECTION 3: MS Excel – INDEX-MATCH & SUMPRODUCT

Q16. Explain INDEX and MATCH functions separately.

Ans: INDEX(range, row_num) returns the value at the specified position in a range. Example: =INDEX(B2:B10, 3) returns the 3rd value in B2:B10. MATCH(lookup_value, range, match_type) returns the POSITION (not value) of a value in a range. Example: =MATCH("Laptop", B2:B10, 0) returns the position number where "Laptop" is found. 0 = exact match.

Q17. How do INDEX and MATCH work together as a VLOOKUP alternative?

Ans: Combined: =INDEX(return_range, MATCH(lookup_value, search_range, 0)). MATCH finds the row position, INDEX returns the value from that position. Advantages over VLOOKUP: (1) Can look LEFT. (2) Search column doesn't need to be first. (3) More flexible and faster on large data.

Ans: Example: =INDEX(D2:D10, MATCH("MED-07", A2:A10, 0)) finds "MED-07" in column A and returns the corresponding value from column D.

Q18. What is SUMPRODUCT? When would you use it instead of SUMIFS?

Ans: SUMPRODUCT multiplies corresponding elements of arrays and returns the sum. It can handle complex conditions without helper columns.

Syntax: =SUMPRODUCT((condition1)*(condition2)*(value_range))

Ans: Example: =SUMPRODUCT((B2:B10="North")*(C2:C10="Electronics")*(E2:E10)) is equivalent to SUMIFS but works with older Excel versions and supports more complex logic like OR conditions.

💡 **Exam Tip:** If question says 'without helper column', think SUMPRODUCT.

SECTION 4: MS Excel – Tools & Features

► Conditional Formatting

Q19. What is Conditional Formatting? Give two examples.

Ans: Conditional Formatting changes the appearance of cells based on rules. It visually highlights data without changing values. Example 1: Highlight all Revenue values > 100,000 in green fill. Example 2: Apply Data Bars to show relative size of values as horizontal bars within cells. Path: Home → Conditional Formatting → Highlight Cell Rules / Data Bars / Color Scales.

Q20. What is the difference between Highlight Cell Rules and Data Bars?

Ans: Highlight Cell Rules: Changes cell background/font based on conditions (e.g., greater than, less than, equal to, between). Data Bars: Shows a horizontal bar inside each cell proportional to the value – bigger value = longer bar. Both are types of Conditional Formatting.

► Pivot Tables

Q21. What is a Pivot Table? Explain the four areas.

Ans: A Pivot Table summarizes large datasets by grouping, counting, and calculating. Four areas: ROWS – categories shown as row labels (e.g., Region). COLUMNS – categories shown as column headers (e.g., Product). VALUES – the numeric data being calculated (e.g., SUM of Revenue). FILTERS – dropdown to filter entire table (e.g., show only Year 2026). Path: Insert → Pivot Table → drag fields into areas.

💡 **Exam Tip:** Common MCQ: 'Which area splits data into columns?' Answer: Columns area. 'Which function CANNOT be used in Values?' Answer: VLOOKUP/LOOKUP.

Q22. Can you use VLOOKUP or LOOKUP in Pivot Table Values area?

Ans: No. Pivot Table Values area only accepts aggregate functions: SUM, COUNT, AVERAGE, MAX, MIN, PRODUCT. VLOOKUP and LOOKUP are lookup functions, not aggregation functions, so they cannot be used there.

► Sorting, Filtering & Freeze Panes

Q23. Differentiate between Sorting and Filtering in Excel.

Ans: Sorting: Rearranges all rows in ascending (A→Z, 1→10) or descending order based on a column. All data remains visible. Filtering: Hides rows that don't match criteria. Shows only matching rows. Data is not rearranged. Both accessed via Data tab.

Q24. What is Freeze Panes? When would you use it?

Ans: Freeze Panes locks row/column headings so they stay visible while scrolling through large datasets. Path: View → Freeze Panes. Options: Freeze Top Row, Freeze First Column, or Freeze Panes (custom – freezes everything above and left of selected cell). Use when your data has 100+ rows and you need to keep seeing the header row.

Q25. What is a Hyperlink in Excel? What types can you create?

Ans: A Hyperlink is a clickable link inside a cell. Types: (1) Link to a Website URL. (2) Link to another Sheet within the same workbook. (3) Link to another File on your computer. (4) Link to an Email address. Path: Insert → Hyperlink, or right-click → Hyperlink.

SECTION 5: QuickBooks – Setup & Interface Customization

Q26. How do you create a new company file in QuickBooks?

Ans: Path: File → New Company → Express Start (or Detailed Start). Enter: Company Name, Legal Name, Address, Phone, Industry Type, Ownership Type, Fiscal Year Start Month. After creation, verify via Company → My Company.

Q27. How do you customize the Icon Bar in QuickBooks?

Ans: To move icon bar: View → Top Icon Bar (or Left Icon Bar). To add icons: View → Customize Icon Bar → Add → select item. To add separator: View → Customize Icon Bar → Add Separator. To rearrange: drag icons in the customize window. To change color: Company → My Company → Edit → Change flag color.

Q28. What is the Favorites Menu in QuickBooks? How do you add items?

Ans: Favorites Menu gives quick one-click access to frequently used features. Path: Lists → Add to Favorites → Select items (Customer Center, Vendor Center, Chart of Accounts, etc.) → OK. The selected items appear in a Favorites section for fast navigation.

SECTION 6: QuickBooks – Chart of Accounts

Q29. What is the Chart of Accounts? What are the main account types?

Ans: Chart of Accounts is the complete list of all accounts used by a business. 5 main types: (1) Income – money earned (Sales Revenue). (2) Expense – money spent (Rent, Utilities). (3) Asset – what you own (Cash, Inventory, Equipment). (4) Liability – what you owe (Loans, Accounts Payable). (5) Equity – owner's investment. Path: Lists → Chart of Accounts.

Q30. What is a Sub-Account? Give an example.

Ans: A Sub-Account provides detailed classification under a parent account. Example: Parent = Utilities (Expense). Sub-accounts: Electricity, Internet, Gas. This way total Utilities shows the combined amount, but you can also see each breakdown. Path: New Account → check 'Subaccount of' → select parent.

Q31. How do you edit, merge, or delete an account in QuickBooks?

Ans: Edit: Right-click account → Edit Account → change details → Save. Merge: Rename one account to match the other's exact name → QB asks to merge → Yes. Delete: Right-click → Delete (only if no transactions linked). If transactions exist, make it inactive instead.

SECTION 7: QuickBooks – Customers & Vendors

Q32. What is the Customer Center? What information does it store?

Ans: Customer Center stores all customer data: Name, Company, Address, Phone, Email, Payment Terms, Tax Status, Transaction History (invoices, payments, credits), Custom Fields, and Balance owed. Path: Customers → Customer Center.

Q33. What is a Custom Field? How is it used?

Ans: Custom Fields let you add extra data that QuickBooks doesn't have by default. Examples: Priority Level, Customer Type, Membership Tier, Vehicle Type, etc. Path: Edit customer/vendor → Additional Info tab → Define Fields. Custom fields can appear in reports.

Q34. What is the difference between deleting and making a customer inactive?

Ans: Delete: Permanently removes the customer. Only possible if NO transactions linked. Inactive: Hides from active lists but keeps all historical records and transactions. The customer can be reactivated later. Use inactive when the customer has past transactions.

💡 **Exam Tip:** To see inactive: check 'Include Inactive' checkbox in Customer Center. An 'X' mark appears next to inactive names.

Q35. What does 'Merging Customers' mean? When would you do it?

Ans: Merging combines two customer records into one. Used when duplicate entries exist (e.g., "Ali Khan" and "Ali khan"). Method: Edit the duplicate → change its name to match the original exactly → QB asks to merge → Confirm. All transactions transfer to the surviving record.

Q36. What is the Vendor Center? How is it different from Customer Center?

Ans: Vendor Center stores information about suppliers and service providers you PAY money to. Customer Center stores information about people who PAY YOU. Vendor Center tracks: bills, payments made, purchase orders. Path: Vendors → Vendor Center.

Q37. How do you create a custom report for vendors?

Ans: Path: Reports → Vendors & Payables → Vendor Contact List → Customize Report → Display tab → check/uncheck columns (e.g., select only Vendor Name, Company, Phone, Sales Tax Agency) → OK. You can save the customized report as a memorized report.

SECTION 8: QuickBooks – Items

Q38. What are the different item types in QuickBooks? Explain each.

Ans: (1) Inventory Item: Physical products tracked by quantity, cost, and price (e.g., Laptop, Rice Bag). (2) Service Item: Work performed, no stock tracking (e.g., Consulting, Repair). (3) Non-Inventory Item: Products bought/sold but NOT tracked in stock (e.g., office supplies bought occasionally). (4) Group Item: Bundle of items sold together as one line on invoice (e.g., Office Setup = Monitor + Keyboard + Mouse). (5) Other Charge: Fees like Shipping, Delivery, Setup. (6) Discount Item: Applies % or fixed discount on invoice. (7) Sales Tax Item: Tax applied to sales.

Q39. What is a Group Item? Give an example.

Ans: A Group Item bundles multiple individual items into one package sold on a single invoice line. Example: 'Office Setup Package' = LED Monitor + Wireless Mouse + Keyboard. On the invoice, customer sees one line item with combined price, but QuickBooks internally tracks each component's inventory separately.

Q40. Differentiate between Inventory and Non-Inventory items.

Ans: Inventory: Quantity tracked, reorder points set, COGS calculated automatically, shows in Inventory Valuation report. Non-Inventory: No quantity tracking, no reorder, used for items you don't keep in stock (e.g., special order items, one-time purchases).

Q41. What is a Discount Item? How does it work on an invoice?

Ans: A Discount Item applies a percentage or fixed amount reduction on the line above it on an invoice. Example: If invoice has 'Laptop Rs.100,000' and next line is '10% Discount', QB applies Rs.10,000 discount. Path: Lists → Item List → New → Type: Discount.

Q42. What is the Reorder Point for inventory items?

Ans: Reorder Point is the minimum quantity level. When stock falls to or below this number, QuickBooks alerts you to reorder. Set during item creation. Example: If Reorder Point = 20 and current Qty = 15, QB shows a reminder.

SECTION 9: QuickBooks – Sales Tax

Q43. How do you set up a Sales Tax Item in QuickBooks?

Ans: Path: Lists → Item List → Item → New → Type: Sales Tax Item. Enter: Name (e.g., GST), Rate (e.g., 17%), Agency (e.g., FBR), Description. To make it most common: Edit → Preferences → Sales Tax → Company Preferences → Most Common Sales Tax.

Q44. What is a Sales Tax Group? How is it different from a Sales Tax Item?

Ans: Sales Tax Item = ONE tax at one rate from one agency (e.g., GST 17% to FBR). Sales Tax Group = MULTIPLE tax items combined (e.g., GST 17% + Provincial Tax 5% applied together). On the invoice, the group shows as one combined tax, but QuickBooks tracks each component separately for reporting to different agencies.

💡 **Exam Tip:** Very common exam question! Remember: Group = multiple taxes appearing as one line.

Q45. What is a Tax-Exempt Customer? How do you set it up?

Ans: A tax-exempt customer is not charged sales tax (e.g., government departments, NGOs). Setup: Edit Customer → Sales Tax Settings tab → Tax Code: Non-Taxable or Exempt. When you create an invoice for this customer, QB automatically skips sales tax.

Q46. What is the Sales Tax Liability Report?

Ans: Shows how much tax was collected from customers, how much is owed to each tax agency, and the balance. Columns: Tax Agency, Tax Rate, Tax Collected, Amount Owed, Balance. Path: Reports → Vendors & Payables → Sales Tax Liability.

SECTION 10: QuickBooks – Invoicing & Accounts Receivable

Q47. How do you create an invoice in QuickBooks?

Ans: Path: Customers → Create Invoices. Select customer, enter date, add line items (Item, Qty, Rate), apply tax, save. Invoice automatically increases Accounts Receivable and decreases Inventory (for inventory items).

Q48. What is the difference between voiding and deleting an invoice?

Ans: Void: Keeps the invoice in records but sets all amounts to ZERO. The invoice number is preserved. Audit trail maintained. Delete: Completely removes the invoice from the system. No record remains. Invoice number is freed up. Best practice: Always VOID instead of delete to maintain clean audit trail.

💡 **Exam Tip:** This is asked in almost every exam. Remember: Void = record stays (amount zero). Delete = record gone.

Q49. What is a Credit Memo? When would you issue one?

Ans: A Credit Memo reduces the amount a customer owes. Used when: (1) Customer returns goods. (2) Overcharging on invoice. (3) Giving a goodwill credit. Path: Customers → Create Credit Memos. You can apply it to an existing invoice, give a refund, or keep as credit for future.

Q50. What is a Memorized Invoice? How do you create one?

Ans: A Memorized Invoice is a saved template for recurring invoices (e.g., monthly subscription). After creating an invoice, press Ctrl+M or Edit → Memorize Invoice. Set frequency (weekly, monthly, etc.). QB will auto-create or remind you to create the invoice on schedule.

Q51. What is Accounts Receivable? How does QB track it?

Ans: Accounts Receivable (A/R) = money customers owe you. QB automatically: (1) INCREASES A/R when you create an invoice. (2) DECREASES A/R when you receive a payment. A/R Aging Summary report shows who owes how much and for how long (current, 1-30 days, 31-60 days, 61-90 days, 90+ days overdue).

Q52. How do you handle partial payments and overpayments?

Ans: Partial: Customers → Receive Payments → enter amount less than invoice total → QB shows remaining balance. Overpayment: Enter amount more than invoice → QB asks whether to leave as credit or refund. The credit can be applied to future invoices.

SECTION 11: QuickBooks – Inventory & Purchase Orders

Q53. What is a Purchase Order? How does the process work?

Ans: A Purchase Order (PO) is sent to a vendor to order goods. Process: (1) Create PO: Vendors → Create Purchase Orders → select vendor, add items, save. (2) Receive Items: Vendors → Receive Items and Enter Bill → link to PO. QB adds items to inventory. (3) Pay Bill: Vendors → Pay Bills → select the bill → pay.

Q54. What is the Inventory Valuation Summary report?

Ans: Shows the value of all inventory items. Columns: Item Name, Quantity on Hand, Average Cost, Asset Value (Qty × Avg Cost). Path: Reports → Inventory → Inventory Valuation Summary. Used to know total stock worth.

Q55. How do you adjust inventory count in QuickBooks?

Ans: When physical count differs from QB records: Vendors → Inventory Activities → Adjust Quantity/Value on Hand. Enter actual physical count. QB calculates the difference and creates an adjustment entry.

SECTION 12: QuickBooks – Payroll & Expenses

Q56. How do you set up payroll in QuickBooks?

Ans: Path: Employees → Employee Center → New Employee. Enter: Name, Address, Designation, Department, Salary/Wage type. Payroll must be enabled: Edit → Preferences → Payroll → Full Payroll. You can then run payroll, print paychecks, and generate payroll reports.

Q57. How do you record an expense using Write Checks?

Ans: Path: Banking → Write Checks. Select bank account (e.g., HBL Business). Enter payee (e.g., WAPDA), amount, assign to expense account (e.g., Utilities: Electricity), add memo. Save. This directly reduces the bank balance and records the expense.

Q58. What is the difference between Write Checks and Enter Bills for recording expenses?

Ans: Write Checks: Immediate payment – money leaves bank right away. Used for instant payments. Enter Bills: Records the bill now, pays LATER. Creates an Accounts Payable entry. Used when vendor gives you credit terms (Net 30 etc.). Pay later via Vendors → Pay Bills.

SECTION 13: QuickBooks – Reports & Book Closing

Q59. What is the Profit & Loss (Income Statement) report?

Ans: Shows total Income, total Expenses, and Net Profit/Loss for a period. Formula: Net Income = Total Income – Total Expenses. Path: Reports → Company & Financial → Profit & Loss Standard. Shows if the business made money or lost money.

Q60. What is the Balance Sheet report? How is it different from P&L?

Ans: Balance Sheet shows what the business OWNS (Assets), OWES (Liabilities), and the Owner's investment (Equity) at a specific DATE. Formula: Assets = Liabilities + Equity. P&L shows performance over a PERIOD (income vs expenses). Balance Sheet is a snapshot at ONE DATE.

💡 **Exam Tip:** P&L = performance over time. Balance Sheet = snapshot at a point.

Q61. What is the A/R Aging Summary report?

Ans: Shows how much each customer owes and how overdue the amounts are. Columns: Current (not yet due), 1-30 days past due, 31-60, 61-90, 90+. Path: Reports → Customers & Receivables → A/R Aging Summary. Helps identify slow-paying customers.

Q62. How do you customize a report in QuickBooks?

Ans: Open any report → click Customize Report → Display tab: add/remove columns. Filter tab: filter by date, customer, item, etc. Header/Footer tab: change title, date range. After customizing, click Memorize to save the custom layout for future use.

Q63. How do you close the books in QuickBooks?

Ans: Path: Edit → Preferences → Accounting → Company Preferences → Set Date/Password. Enter closing date (e.g., December 31, 2025) and set a password. After this, any changes to transactions before the closing date will require the password, preventing accidental modifications.

Q64. What reports should you generate before closing the fiscal year?

Ans: (1) Profit & Loss Statement (to know net income). (2) Balance Sheet (to verify Assets = Liabilities + Equity). (3) Sales Tax Liability (to check tax owed). (4) A/R Aging Summary (to check outstanding receivables). (5) Inventory Valuation (to verify stock values). (6) Trial Balance (to verify debits = credits).

Quick Reference – Formula Cheat Sheet

Function	Syntax	When to Use
SUM	=SUM(range)	Add all values
SUMIF	=SUMIF(criteria_rng, criteria, sum_rng)	Sum with 1 condition
SUMIFS	=SUMIFS(sum_rng, crit_rng1, crit1, ...)	Sum with 2+ conditions
COUNT	=COUNT(range)	Count numeric cells
COUNTIF	=COUNTIF(range, criteria)	Count with 1 condition
COUNTIFS	=COUNTIFS(crit_rng1, crit1, ...)	Count with 2+ conditions
AVERAGE	=AVERAGE(range)	Mean of values
AVERAGEIF	=AVERAGEIF(crit_rng, criteria, avg_rng)	Average with 1 condition
AVERAGEIFS	=AVERAGEIFS(avg_rng, crit_rng1, crit1, ...)	Average with 2+ conditions
VLOOKUP	=VLOOKUP(value, table, col, FALSE)	Find value in 1st column, return from another
HLOOKUP	=HLOOKUP(value, table, row, FALSE)	Horizontal lookup (search in row)
INDEX	=INDEX(range, row_num)	Return value at a position
MATCH	=MATCH(value, range, 0)	Find position of a value
INDEX-MATCH	=INDEX(rtn_rng, MATCH(val, srch_rng, 0))	Flexible lookup (replaces VLOOKUP)
SUMPRODUCT	=SUMPRODUCT((cond1)*(cond2)*(values))	Array-based multi-condition sum
IF	=IF(condition, true_val, false_val)	Conditional result

Quick Reference – QuickBooks Paths

Task	Path in QuickBooks
New Company	File → New Company → Express/Detailed Start
Icon Bar	View → Top/Left Icon Bar → Customize
Favorites	Lists → Add to Favorites
Chart of Accounts	Lists → Chart of Accounts → New
New Customer	Customers → Customer Center → New
New Vendor	Vendors → Vendor Center → New
New Item	Lists → Item List → New
Sales Tax	Lists → Item List → New → Sales Tax Item
Create Invoice	Customers → Create Invoices
Receive Payment	Customers → Receive Payments
Credit Memo	Customers → Create Credit Memos
Purchase Order	Vendors → Create Purchase Orders
Receive Inventory	Vendors → Receive Items and Enter Bill
Write Check	Banking → Write Checks
Enter Bill	Vendors → Enter Bills
Pay Bills	Vendors → Pay Bills
Employee	Employees → Employee Center → New
P&L Report	Reports → Company & Financial → P&L Standard
Balance Sheet	Reports → Company & Financial → Balance Sheet Standard
Tax Liability	Reports → Vendors & Payables → Sales Tax Liability
A/R Aging	Reports → Customers & Receivables → A/R Aging Summary
Inventory Report	Reports → Inventory → Inventory Valuation Summary

Closing Books

Edit → Preferences → Accounting → Set Date/Password

— END OF NOTES —
