

Note: No course outline for this subject was given to us, so here is one we made ourselves according to what we were taught.

COURSE OUTLINE

Course:	Business Math I	Course Code:	MT1002
---------	-----------------	--------------	--------

COURSE DESCRIPTION

This course introduces foundational mathematical concepts, focusing on algebra, calculus, and financial mathematics to solve quantitative business problems.

COURSE CONTENTS

TOPIC AREA	CONTENTS
Algebraic Fundamentals	Solving linear and quadratic equations, supply and demand intersections.
Functions and Graphs	Linear, exponential, and logarithmic functions, modeling business trends.
Mathematics of Finance	Simple and compound interest, present and future values, annuities.
Matrix Algebra	Systems of linear equations, Gaussian elimination.
Introductory Calculus	Limits, continuity, rules of differentiation.
Business Optimization	Absolute maxima and minima, marginal cost/revenue, maximizing profit.

Note: The material covered in this outline corresponds to chapters 1 through 9 in the course textbook.
