(Part A)

1. Please answer within the given space.
2. (No answer sheets required).

25

Do not write below this line

Attempt all the questions.

CLO2: Understand and apply basic and advanced concepts of MS Excel

Q.1 Section A – Multiple Choice Questions (MCQs)

[10]

- I. SUMIF is used when you want to sum values based on:
A) Multiple conditions ☒ B) A single condition C) A lookup value D) A sorted range
- II. VLOOKUP searches for a value in the _____ column of a table:
A) Last B) Middle ☒ C) First (leftmost) D) Second
- III. A relative cell reference in Excel:
A) Remains fixed when copied ☒ B) Changes when copied to another cell C) Is locked with \$ signs
D) Same as absolute reference
- IV. Pivot Tables in Excel are mainly used for:
A) Applying conditional formatting ☒ B) Analyzing and summarizing data C) Deleting records
D) Printing specific rows
- V. Conditional Formatting in Excel helps to:
☒ A) Analyze data visually with color rules B) Delete rows based on values C) Sort data A to Z
D) Apply print settings

- ✓ VI. Chart of Accounts in QuickBooks contains:
A) A list of customers ☒ B) All accounts used in the business C) Vendor purchase records
D) Inventory reports
- ✓ VII. A Service Item in QuickBooks is used for:
A) Tracking stock levels ☒ B) Billing for services rendered C) Calculating tax rates
D) Recording cash flow
- ✓ VIII. A Vendor in QuickBooks is someone who:
A) Buys goods from the business ☒ B) Provides goods or services to the business ✓
C) Pays taxes to the government D) Generates profit
- ✓ IX. An Invoice in QuickBooks is sent to:
A) A vendor to request goods ☒ B) A customer to request payment C) An employee for salary
D) A bank for transactions
- ✓ X. A Sub-account in QuickBooks is used for:
A) Deleting duplicate accounts ☒ B) Better classification under a parent account ✓
C) Applying tax automatically D) Generating all reports

CLO2: Apply basic and advanced Excel concepts

CLO4: Create Charts of Accounts

CLO5: Handle customers, vendors, and system operations

Q2: Section B – Short Questions

[15]

Attempt any FIVE questions. Each question carries 3 marks.

- ✓ I. What is AVERAGEIF? Write its syntax and provide one practical example from a sales scenario. [3 marks]
- ✓ II. What is Conditional Formatting in Excel? List two practical uses with examples. [3 marks]
- III. Differentiate between a Service Item and an Inventory Item in QuickBooks. [3 marks]
- ✓ IV. What is an Invoice in QuickBooks? What are its basic parts? How do you void an invoice? [3 marks]
- ✓ V. What does 'making a customer inactive' mean in QuickBooks? How is it different from deleting? [3 marks]
- ✓ VI. What is a Sub-account in QuickBooks? Give an example of a parent account and its sub-accounts. [3 marks]
- VII. What is a Credit Memo in QuickBooks? When would you issue one to a customer? [3 marks]

ii) Conditional formatting is when values in excel are given colours (e.g red, blue) according to a set criteria. The colour can be on both the text and field. One use would be highlighting the highest paid customers in the sheet, using the top 5%. Another use would be seeing which customers would be in the bottom 5% of purchasers. The user can also set their own custom rules to apply these conditions to analyze the data with colour references.

i) Average IF syntax: $=AVERAGEIF(\text{range}, \text{criteria}, [\text{average-range}])$
It is used to calculate the average values from a range, but only the values which meet a certain condition. An example would be sales average from an array, but only the customers from the 'punjab' region.

v) Marking the customer inactive removes it from the sheet (e.g. ^{Customer} vendor, ^{balance} customer), but the customers records still remain in the sheets. Deleting the ^{Income} record completely removes the record ^{statement} from the book and it no longer affects any sheet.

vi) Sub-accounts are accounts part of parent accounts. They are categories which are smaller parts of larger accounts. A parent account would be 'Motor Vehicle Expenses' then its sub-accounts would be 'fuel expenses', 'repair expenses' and other parts of that big parent account.

iv) An invoice in Quick books ~~consists~~ of is used to send the customer a request of payment. Its parts include customer details, item amount, amount of the payment, sales or any other [✓] tax; if needed to add, ~~the~~ description of the item. [✓]

To void the invoice, go to invoice settings and select the option to void the invoice, also select which invoice to void.

(3)
